

Did you know that your electric storage water heater makes up 30-40% of your total electricity costs?

Introducing...
Instantaneous Gas Water Heaters...
Clean, Green and easier on the pocket

Five reasons to use a Gas Water Heater

- ❖ **Convenience** - Instant hot water 20 seconds after the tap is turned on, no waiting.
- ❖ **Flexible** - Available as 80 Watts internal and 45 Watts external units, giving you a choice
- ❖ **Economical** - No need for a water heater in each bathroom, one unit can supply up to four (4) outlets*, thereby reducing electricity cost substantially.
- ❖ **Environmentally Friendly** - The water heaters are powered by LPG or Natural Gas via a cylinder or a reticulated gas network, no more fumes from diesel generators.
- ❖ **Efficient** - Fuel is only burnt when hot water valves are open, saving energy and reducing waste.

- ✓ All appliances are installed by certified Gastech engineers
- ✓ We provide competitive service and maintenance contracts
- ✓ Appliances come with a manufacturers warranty
- ✓ Extended warranty available
- ✓ We also have other gas appliances, cookers, cooling systems and power generation units available.

Internal Models

Enjoy the luxury of an endless supply of hot water.

The compact design of the GES1 series makes it easy to install anywhere.

Uses 80 Watts of electricity ONLY

- Available in 3 sizes:
- 12E1 - supplies 2 outlets
 - 16E1 - supplies 3 outlets
 - 28E1 - supplies 4 outlet

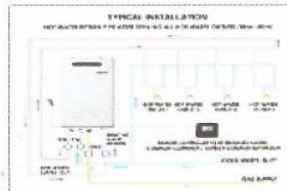

External Models

Hot water without the wait...or waste...

The GES5 series is designed for outdoor installation, reducing the need for construction work and vents

Uses only 45 Watts of electricity

- Available in 3 sizes:
- 12E5 - supplies 2 outlets
 - 16E5 - supplies 3 outlets
 - 30E5 - supplies 4 outlet

Commercial & Industrial

Need more than 4 hot water outlets? External models can be linked for hotels, hospitals and multi outlet commercial premises.
The typical installation in the picture below shows:
Hotel with 6 Floors 60 rooms, each room with hand basin and bath.
Configuration for this setup was:
-6 units of 24GES5 External tanks
-2 units of 500L water tanks
-One master control box
Total power consumption was (45watt x 6units) =270watts.

Unbelievably Low Power Consumption!!!
